Journées de l’Ecole Doctorale\textsuperscript{85} de Nice

1\textsuperscript{st} & 2\textsuperscript{nd} of September 2016
Faculty of Science, Valrose - Nice

SCIENTIFIC PROGRAM

Invited Speakers:
Adrian Apetri - Janssen pharmaceutical Companies Jonhson&Jonhson - Netherlands
Séverine Morizur - Institut Cochin, Paris - France
Benoit Moury - Institut National de la Recherche Agronomique - Avignon, France
OUR GUESTS

Adrian Apetri – Janssen pharmaceutical Companies
Jonhson&Jonhson – Netherland

Séverine Morizur – Institut Cochin
Paris, France

Benoit Moury – Institut National de la Recherche Agronomique
Avignon, France
DETAILED PROGRAM

Thursday, September 1st

7h30 – 8h00  Registration

8h00 – 8h15  Opening speech – Dr Thomas Lamonerie, Director of the doctoral school

8h15 – 9h30  Oral communication session 1

1. Pro-tumorigenic role of HACE1 in melanoma. .......................................................... 26
   Najla EL HACHEM

2. ARIH1 a novel regulator of mitophagy in cancer cells................................. 27
   Elodie VILLA

3. Study of the phospho-regulation of the tumor suppressor HACE1 and its role in cell-cell junction stability................................................................. 28
   Maria Isabel ACOSTA LOPEZ

4. Extracellular matrix produced by BRAF inhibitor-resistant melanoma cells promotes therapeutic resistance to drug-sensitive cells...................... 29
   Rania BEN JOUIRA

5. In vitro and in vivo analysis of the oncogenic role of Otx2 in medulloblastoma................................................................. 30
   Almahdi CHAKROUN

6. Function of the transcription factor Otx2 in normal and tumoral cerebellum development................................................................................. 31
   Salsabiel EL NAGAR

7. Cav1 calcium channels identification for their involvement in carcinoma cell collective invasion................................................................. 32
   Eloise GRASSET

9h30 – 10h15  Oral communication session 2

1. Heteromerization of K2P channels : how heteromerization increases functional diversity................................................................. 33
   Sandy BLIN

2. Low cost venom extractor based on Arduino® board for electrical venom extraction from arthropods and other small animals.......................... 34
   Thomas BESSON
3. TH17 TNFα CD4 T cells induce osteoclasts that participate to hematopoietic stem cells egress implicated in the exacerbation of the inflammatory bowel disease (IBD) ................................................................. 35

Agathe BOUCOIRAN

10°45 – 11°45 Keynote Lecture
Liver Polyploidy : New Insights into Development and Disease. .................. 21
Dr. Séverine Morizu

11°45 – 12°30 Oral communication session 3

1. Functional characterization of LincH3, a long non-coding RNA modulated by hypoxia in early stage lung adenocarcinomas .................................................. 36
Laura MORENO-LEON

2. Influence of genomic context on integration site selection by human L1 retrotransposons. ........................................................................... 37
Tania SULTANA

3. A link between steroid signaling pathways and L1 retrotransposition. ...... 38
Ramona GALANTONU

4. Gene expression control by novel classes of small non-coding RNAs in lipid-laden macrophages .............................................................. 39
Zoheir HIZIR

12°30 – 13°30 Lunch Break

13°30 – 15°00 Poster session 1 & Workshop

15°00 – 16°00 Keynote Lecture
Mini-HA fitness and dynamics ..................................................................... 20

Adrian Apetri

16°00 – 16°30 Coffee Break

16°30 – 17°00 Oral communication – Session 4

1. Implication of REDD1 (Regulated in Development and DNA Damage response-1) in the activation of inflammatory pathways ......................... 40
Faustine PASTOR

2. Deciphering the role of ft1 in the pancreas ........................................... 41
Tiziana NAPOLITANO

3. Non-acidic activation of ASIC3 by endogenous lipids ......................... 42
Sébastien MARRA

17°00 – 19°00 Drinks

19°00 – 21°30 Dinner
Friday, September 2\textsuperscript{nd}

7\textsuperscript{th}30 – 8\textsuperscript{th}15  Registration

8\textsuperscript{th}15 – 9\textsuperscript{th}30  Oral communication session 5

1. ESCRT is required for the function of the Zebrafish Left/Right organizer..43
   Thomas JUAN

2. Phospholipase D2 specifically regulates TREK potassium channels via direct interaction and local production of phosphatidic acid. .................44
   Yannck COMOGLIO

3. Regulation of Smoosened induces Fused activation in Hedgehog pathway.
   Cécile Giordano...........................................................................................................45

4. Role of Rab G Proteins in Candida albicans........................................46
   Rohan Sanjay WAKADE

5. Coronary artery formation is driven by localized R-spondin3 signaling. ...
   Fabio DA SILVA

6. CD98hc is required to maintain the functional and dynamic interface between the epidermis and the underlying dermis........48
   Floriane S. TISSOT

9\textsuperscript{th}30 – 10\textsuperscript{th}30  Keynote Lecture

Preserving the efficiency of plant resistance against viruses: strategies from the individual host plant to agricultural landscapes.................................22

   Benoit Moury

10\textsuperscript{th}30 – 11\textsuperscript{th}00  Coffee Break

11\textsuperscript{th}00 – 12\textsuperscript{th}15  Oral communication – Session 6

1. Identification of epigenetic marks in the plant parasitic root-knot nematode Meloidogyne incognita.................................................................49
   Loris PRATX

2. Comprehensive Transcriptome Profiling of Root-knot Nematodes During Plant Infection and Characterization of Species-Specific Traits ..........50
   Chinh-Nghia NGUYEN

3. Maternal traits and breeding success in the perspective of climate change: is the future of the Antarctic fur seal (Arctocephalus gazella) getting darker?.................................................................................................51
   Lauriane,MASSARDIER-GALATA

4. Characterization of root-knot nematode effectors targeting host nuclear functions..........................................................52
   Nhat My TRUONG
5. Could population genetic be used to improve insects reared for biological control purposes? ................................................................. 53
Bastien QUAGLIETTI

6. A secreted MIF cytokine enables aphid feeding and represses plant immune responses ........................................................................... 54
Elodie NAESSENS

12h15 – 13h30  Coffee Break

13h30 – 15h00  Poster Presentation – Session 2

15h00 – 16h00  Keynote Lecture

16h00 – 17h30 – Oral Communication – Session 7

1. Statistical study of the morphological properties of pyramidal sensorimotor neurons in mice. ................................................................. 55
Nikita LUKIANETS

2. Effect of Seizures on the Severity of Epileptic and Cognitive Phenotypes in Mouse Models of Scn1a Mutations ................................................................. 56
Ana Rita PEREIRA

3. Blocking glucocorticoid receptors prevents acute effects of amyloid beta oligomers at the hippocampal synapses. ................................................................. 57
Scherazad KOOTAR

4. Aging, proteostasis and Alzheimer's disease ................................................................. 58
Yannis GERAKIS

5. Computer-Assisted blood-based diagnosis and prognosis in psychiatry. 59
Douglas DAOUDLARIAN

17h30 – 18h00  JEDNs Awards
POSTER PRESENTATION - SESSION 1

Thursday, September 1st

1. Screening novel cytoskeleton-interfering drugs using CytoFRET reveals novel regulatory mechanisms of actin and vimentin dynamics. ........................................62
   Frederic LARBRET

2. Preclinical validation of new anti-melanoma compound in B-Raf inhibitors sensitive and resistant melanoma cells.................................................................63
   Emilie JAUNE

3. Characterization of epigenetic mechanisms involved in prostate cancer related to early exposure to toxic and nutritional imbalances.................................64
   Katia GHARIB

4. Sensing of bacterial virulence: Characterization of the Anti-Virulence innate immune response........................................................................................................65
   Elsa GARCIA

5. Molecular mechanisms involved in the pathogenesis of melanoma: role of exosomes and vitamin K3...............................................................................................66
   Robin DIDIER

6. Mode of interaction of HACE1 E3 ubiquitin-ligase with its target Rac1 ....67
   Romain LOTTE

7. Pathogenesis of obesity and type 2 diabetes: implication of the small GTPase Rab4b in macrophages..........................................................................................68
   Gwenaelle BOUGET

8. Bax Inhibitor-1 (BI-1) deficiency leads to unresolved endoplasmic reticulum stress, perturbing hepatic metabolic homeostasis and causing irreparable liver damage in tunicamycin-challenged mice .............................................69
   Cynthia LEBEAUPIN

9. Study of the effect of an active metabolite in the alterations of germ cells differentiation and microRNAs expression involved in male infertility due to early exposure to endocrine disruptors.........................................................70
   Wafa BEN SALEM

10. Characterization of novel somatic mutations of ABCA1 gene in chronic myelomonocytic leukemia.........................................................................................71
    Manon VIAUD

11. Low-protein diet suppresses cancer progression through immune system modulation ............................................................................................................72
    Jozef BOSSOWSKI
12. DNA damage and the activation of the p53 pathway mediate alterations in metabolic and secretory functions of adipocytes

Bastien Vergoni

13. Investigating nuclear miRNA-dependent gene expression control

Raphael Mategot

14. Identification of neurons controlling Dilps secretion according to nutrient in Drosophila

Eleonora Meschi

15. The low complexity domain of the RNA binding protein IMP is required for neuronal granule homeostasis

Jeshlee Vijayakumar

16. Coordination of growth and maturation by Allatostatin-A

Derya Deveci

17. Identification and characterization of new LR determination factors in Drosophila

Anil Chougule

18. Hedgehog secretion mechanisms in Drosophila melanogaster

Caterina Novelli
POSTER PRESENTATION - SESSION 2

Friday, September 2nd

19. Adiponectin: a key player in the antidepressant and anti-inflammatory effects of enriched environment ................................................................. 80
   Sarah NICOLAS

20. Airway epithelium differentiation: digging inside each single cell ............. 81
   Sandra RUIZ GARCIA

21. Patched as a new target for adrenocortical cancer .................................. 82
   Anida HASANOVIĆ

22. Investigation into the function of the N-terminal region of OSBP .............. 83
   Denisa JAMECNA

23. Regulation of VEGFC in renal cell carcinomas ........................................ 84
   Papa Diogo NDIAYE

24. Roles of kinases during Nematostella vectensis regeneration: identification and implication of the PD/VEGFR family ................................. 85
   Hereroa JOHNSTON

25. Natural variation in yeast ageing reveals genetic and environmental factors .............................................................................................................. 86
   Benjamin BARRE

26. Role of oncogenic KRAS variants in the immune response in lung adenocarcinomas ...................................................................................... 87
   Nathalie YAZBECK

27. Characterization of the molecular pathways involved in the reprogramming of renal epithelial cells following telomerase overexpression ........ 88
   Margo MONTANDON

28. Powerful decomposition of complex traits in a diploid model .................. 89
   Johan HALLIN

29. CD98hc (SLC3A2) presents a novel longer variant with an alternative promoter ..................................................................................................... 90
   Tomàs DE GARAY

30. Investigation of human Rap1 role in cellular senescence and metabolism .............................................................................................................. 91
   Liudmyla LOTOTSKA

31. Anticancer drugs side effects and ion transport ........................................ 92
   Aurèa COPHIGNON
32. Evolution of venom composition of the parasitoid wasp Leptopilina boulardi in response to resistance of the Drosophila melanogaster host .................. 93
   Fanny CAVIGLIASSO

33. The «communicasome» in inter-species communication: Venom extracellular vesicles-mediated transport of RhoGAPs parasitoid wasp toxins inside Drosophila host lamellocytes .................................................. 94
   Bin WANG

34. Role of ERF-B2.1 and ERF-B2.11 transcription factors in oxygen sensing and adaptation to hypoxia in roots and nodules of Medicago truncatula. 95
   Martina ROVERE

35. Study of the preference-performance relationship in aphid parasitoids ....... 96
   Le Thu Ha NGUYEN

36. The Phytophthora parasitica effectors Avh153 and Avh195: two opposite regulators of plant cell death? ...................................................... 97
   Serena TESTI

37. Molecular mechanisms of the regulation of thyroid function by iodide ...... 98
   Lun JING

38. Wolff Chaikoff effect: molecular mechanisms by proteomic approaches .... 99
   Maha HICHRI
